if all the numbers of a particular bit length is written in assending order the first half of those will be complement of second half

for eg: for 2 bit length $00\ 01\ 10\ 11$ here 00 is complement of 11 and 01 is of 10

 $complement(x) = x \oplus (n-1)$ where n is bit length

x & complement(x) = 0
